

Project Plan

This is a rough project plan to help while implementing the system.

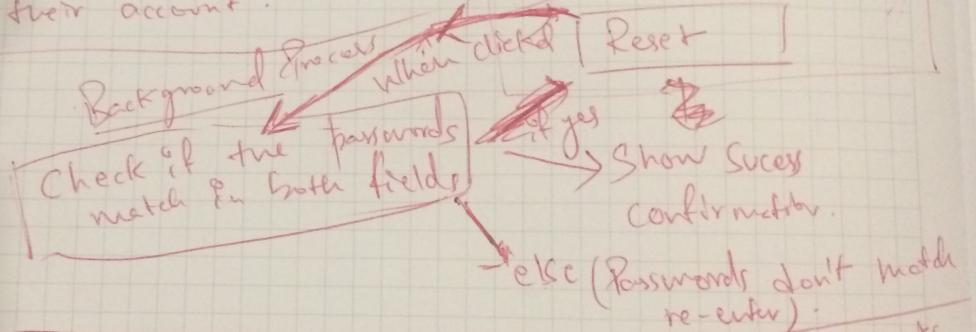

- When they click on the link in the email, they are brought to another form, where they can enter their new password for their account.

When reset link clicked.
form open.
Enter new password.

Please re-enter password.

Security Concern:
~~Return~~ → Password Strength (in order to keep accounts safe with strong password)
(Enter password with number, letter, capital, small and other shift)

- Checking if the email is in correct format / if email is correct
- Password Encryption

Database Design.

| Users |
|----------------|
| userId int (P) |
| name var(50) |
| email var(50) |
| password |
| token |

database

index

header

cursor

connection

forget password

reset password

The idea is do generate a random token and save it in db. And use it & email to change the password.
